

CLOUD ENTERPRISE VERSION

Overview:

The eCost Cloud TMS application has been designed and developed to accommodate the current technology available to allow easy access from any internet enable device.

Call record data is passed from each of the customer's communication platforms using secure, reliable delivery transportation into the eCost Hosted Server via the internet.

The Multi-Site / Multi-user design architecture enables an organization consisting of multiple communication platforms or a single site to centralize the call record data in a secure environment and then enable easy retrieval or viewing with the convince of modern technology i.e web browser or mobile device.
